

Press release

Textar ABS sensors now available from the TMD Friction central warehouse in Leverkusen, Germany

Leverkusen, 29. April 2019. TMD Friction restructures the sale and distribution of its Textar ABS sensors: The ABS sensors from TMD Friction's European aftermarket central warehouse in Leverkusen-Hitdorf will be shipped to Textar customers with immediate effect. This means that customers will receive even more products during brake servicing via one and the same order process. The Textar product range includes more than 250 ABS sensors and is continually being expanded to include new vehicle covers. The brake specialist currently covers a large portion of the vehicle market in the DACH region. TMD Friction offers both active and passive ABS sensors, which determine the wheel speed either using their own power supply or through inductive measurements.

The ABS sensors are packed in sturdy boxes with a Textar label. There are two different types of packaging, depending on whether only the sensor or the corresponding cable is required. The customer can find the most important information clearly presented on the packaging label, including an ABS pictogram, the number of units packed, the specific vehicle models with which this sensor is compatible, and the installation location (front and/or rear axle). Further information on the wheel speed sensors – including the program, vehicle links and packaging sizes – can be quickly and easily retrieved from the Brakebook online catalogue (www.brakebook.com) under the corresponding symbol.

“Textar customers can now obtain their ABS sensors directly from our European central warehouse in Leverkusen-Hitdorf. After our move to the new central warehouse, we decided to use the newly gained storage space to assume responsibility for the independent distribution of our products. This enables us to better respond to customer requirements and provide them with all components for a successful brake service directly from a single source,” explains Patrick Baßiere, Global Category Manager at TMD Friction.
